

Steps to imports .csv files into SQL server:

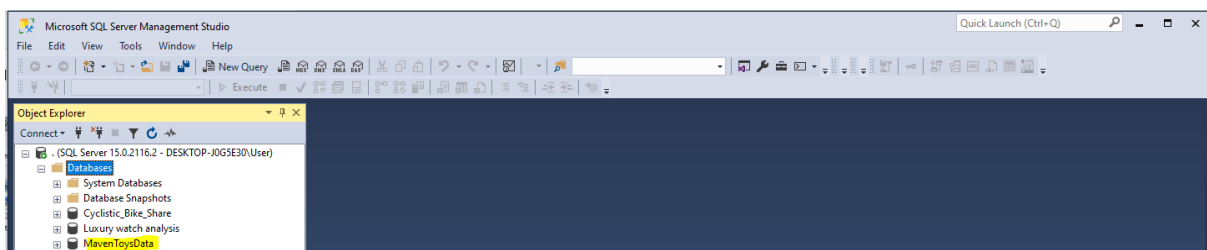

1. Create database
 - Open and connect to your SQL server management studio

- Right click on Databases
- Select New Database
- Name the database as in the following pop-up screen

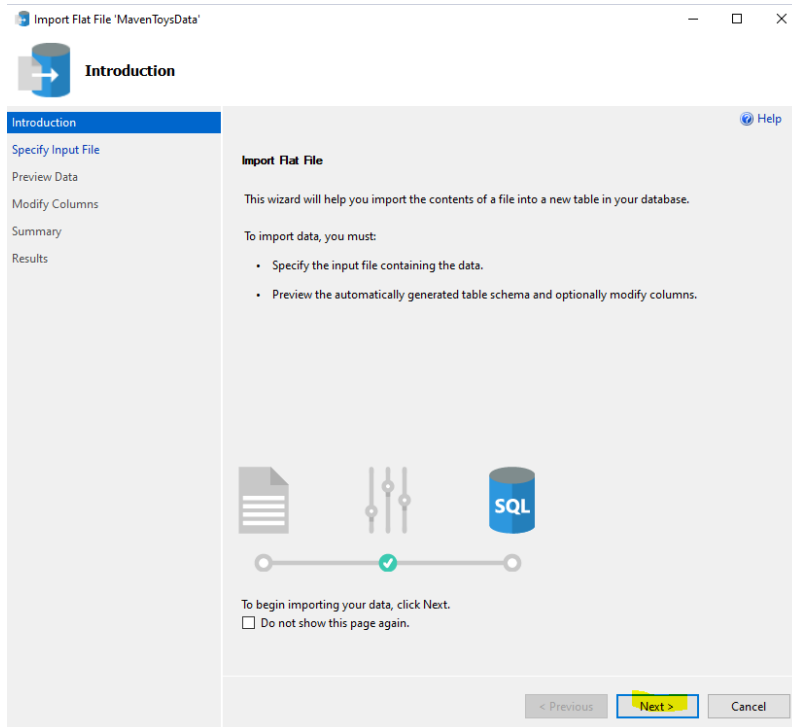

- Click on OK
- And if you expand Databases, you will see your newly created database

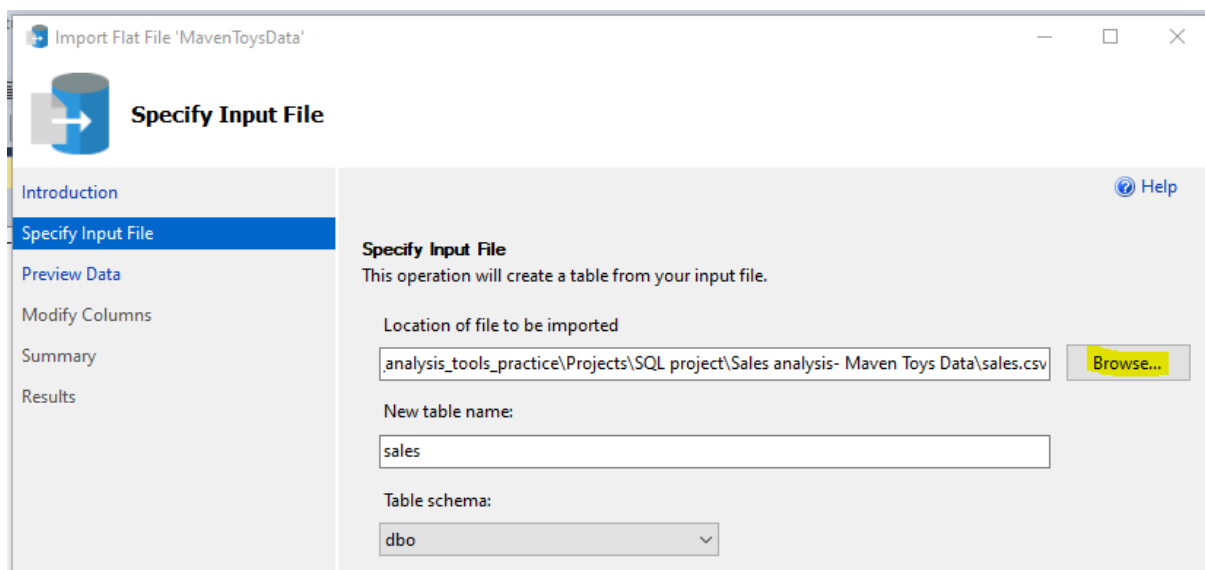

2. Import the .csv files

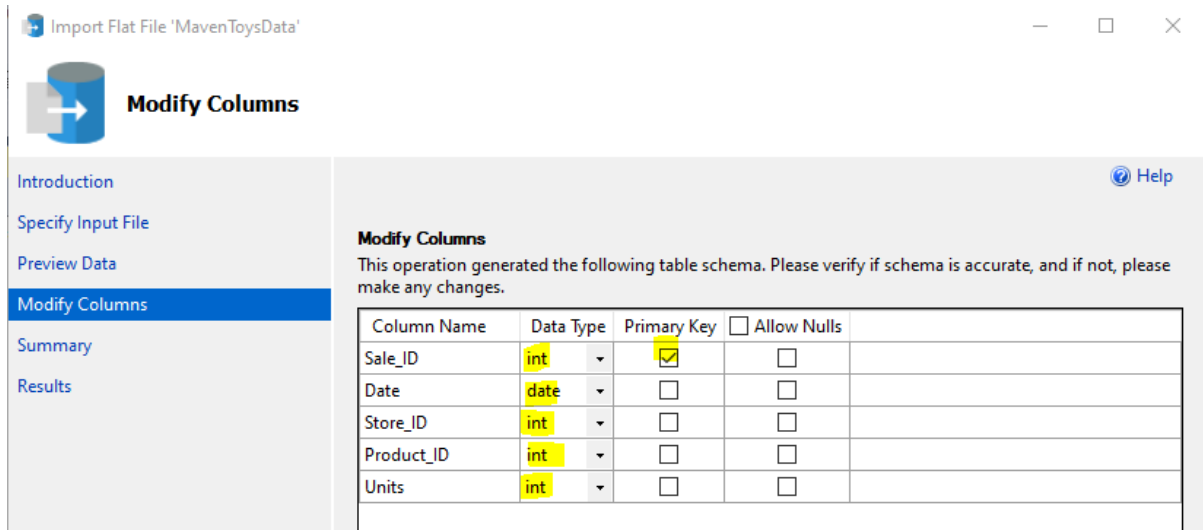

- Right click on the newly created database
- Go to Task/Import Flat File
- Click on next on the following screen

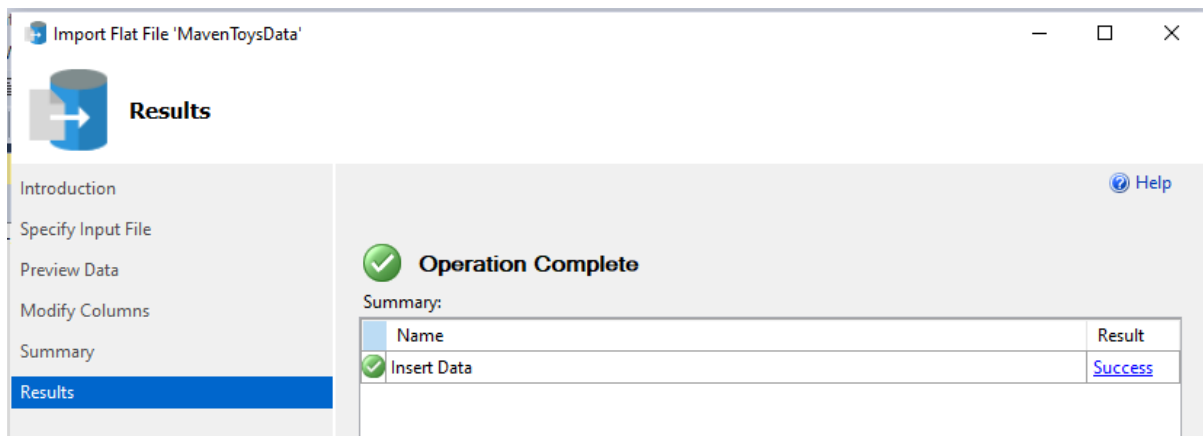

- Browse your table:
 - In this example, I imported the "Sales" table

- Preview data and modify column settings
 - In this example I modified the columns setting as shown on the screen below

- I clicked on “next” and then “Finish” and got the following result:

- Operation successfully completed.
 - If you get an error, go back to check your tables format.
- I did the same to import the remaining csv files
